Sprint-1–UserLoginPage TestCase:

Headinglink:<https://fire-management-system.netlify.app/?>

Code:

```
import React, {Component} from 'react'
export default class Login extends Component {
  constructor(props) { super(props);
    this.state = {password: '', email: '', isButton: true};
  }
  handleChangePassword = (event) => { this.setState({password: event.target.value}); }
  handleChangeEmail = (event) => {
    this.setState({email: event.target.value});
  }
  onClickEvent = () => {
```

```
if(this.state.email!=="ibmiot015@gmail.com" || this.state.password!=="iotibm"){
    alert("Emailid or password is incorrect")
}
}

render(){ return(
    <form>
        <h3>SignIn</h3>

        <div className="mb-3">
            <label>Email address</label>
            <input type="email" className="form-control" placeholder="Enter email"
                value={this.state.email}
                onChange={this.handleChangeEmail}
            />
        </div>

        <div className="mb-3">
            <label>Password</label>
            <input type="password"
                className="form-control"
                placeholder="Enter password"
                value={this.state.password}
                onChange={this.handleChangePassword}
            />
        </div>

        <div className="d-grid">
            {
                (this.state.email==="ibmiot015@gmail.com" && this.state.password==="iotibm")
```

?
